

CUSTOM PORTABLE JAW PLANTS

You can count on an outstanding level of applications expertise, engineering know-how, and quality manufacturing behind all Lippmann-Milwaukee portable plants. Lippmann engineers provide fast and efficient portable plant designs and layouts using state-of-the-art computer systems. Each plant can be customized to fit your specific needs.

**HOPPER EXTENSIONS**

Lippmann hopper extensions allow portable plants to be rear fed while raising hopper capacity. Extensions are offered in various configurations and capacities.

**EXTENDED CONVEYOR**

Discharge conveyors are lengthed for direct feeding onto screen decks. Wrap drives can offer up to 15' clearance from pulley to ground.

CRUSHER "DOCKING" STATIONS

Portable jaw plants can be docked below rock-box type structures to allow feed from haul trucks. Maintaining the portable design allows operators to quickly move their plant if needed at a different location.

HYDRAULIC HOPPER REMOVAL

The hydraulic hopper package aims to eliminate downtime and costly crane rentals. The self-contained system has an on-board gas powered unit for actuating the hydraulic cylinders. An energized hopper allows operators to full the main chassis without the need for off-plant equipment.
